Project Description

The Media Academy in Nuremberg is a central institution of public German broadcasting services for further education and seminars. Its shareholders are the ARD, the ZDF and Deutschlandradio.
To ensure that this building is again state-of-the-art in terms of fire protection technology, extensive upgrades and measurements have taken place. As a part of this endeavour, the newly developed Lindner fire protection ceiling LMD F30 TIPmotion® was used on an area of four floors, a total of 450 sqm. The decisive factors in favour of this system were its unique features: it can be opened and moved without tools, only by tapping. Thus, large openings, as need during revision works for example, can be created quickly and easily. The ceilings also saw numerous individual adjustments in the course of the project. For one thing, a solution needed to be constructed that ensured flawless function of the ceiling in inclined hallways. Furthermore, LMD F30 TIPmotion® offers other qualities aside from functional fire protection. Fitted with perforations, the ceiling panels improve the acoustics in the building. Integrated lighting systems from the Lindner product range make for illumination.

General

Building Type	Schools, Public and institutional buildings
Company Division	Lindner SE | Ceilings
Completition	2016
Client	ARD.ZDF Medienakademie

Completed Works

- **Ceilings**
