

CERAMIN®

Ceramic-like composite material

CERAMIN® is a ceramic-like composite material with application-optimized properties: with its low weight per square metre, CERAMIN® is highly loadable and extremely sturdy. Therefore, it is perfectly suitable as basis for e. g. floor coverings or wall and floor tiles.

Due to its lower material density, CERAMIN® is significantly lighter than ceramic, yet equally rigid, water-resistant and highly loadable. The CERAMIN® components are interconnected at low temperatures in an energy-conserving and low-emission mode of production. CERAMIN® forms the ecological and economical basis for new ideas and long-living products in the residential and commercial area.

- absolutely water-resistant
- made in Germany
- easy machining
- suited for all wet and humid rooms in conjunction with HYDRO and sealing
- diverse colours, surfaces and sizes
- applicable on LIGNA and NORTEC

Samples for building portfolio

Hotels, Shops, Tea Kitchens, Sauna Areas

Technical details

Thickness		4.5 mm
Length		available in different lengths
Width		available in different widths
Fire behaviour		B _{fl} -s1
Slip resistance	DIN EN 13893:2003	class DS
Thermal resistance		0.02 m ² K/W – suitable for floor heating

Surfaces

Structure		CERAMIN® carrier panel with integrated laying system, decor layer, high-quality surface sealing
Variations		unlimited range of decors
Gloss level		mat
Slip resistance class	EN 51130:2014	R10
Service class		34/AC6
