

BSH Research Centre

Dillingen a.d.Donau, Germany

Project Description

In the Swabian town of Dillingen, BSH Hausgeräte GmbH operates one of the world’s largest production plants for dishwashers. Over 2,300 employees produce an annual output of about two million units. The site in Dillingen also houses research facilities, and among those is a newly erected technology centre. With an investment of 16 million Euros, this construction endeavour created 18 laboratories and working places for 300 employees. As a part of this project, Lindner was contracted with the production and installation of post-cap ceiling systems with heating and cooling technology. These systems have been installed in the open-space office areas and in the conference rooms, where they ensure comfortable and consistent temperatures. Thanks to sophisticated ceiling radiation technology in combination with process heat recirculation, the ceilings have become an important factor in the energy concept of the building.

- **Dry lining**
Plasterboard ceiling systems

General

Building Type	Office buildings, Research Rooms
Company Division	Lindner SE Heizen und Kühlen
Completion	2015
Client	BSH Hausgeräte GmbH
Architect	Michael Müller

Completed Works

- **Ceilings**
Heated and Chilled Post Cap Ceilings
Metal Ceilings
