

Rohde & Schwarz Building 11

Munich, Germany

Project Description

The Rohde & Schwarz technology group develops and produces a wide range of state-of-the-art communication, information and security technology. A research building of the company in Munich's Werksviertel district has now been renovated and expanded. The fit-out of Building 11 involved Lindner with installing extensive plasterboarding on ceilings and walls as well as heated and chilled ceilings and other ceiling types. Glass partition systems and doors provide the necessary spatial separation in the offices. This project is an example of the long and successful collaboration between Lindner and Rohde & Schwarz in this company's real estate projects.
