

Vapaala Headquarter Caverion

Vantaa, Finland

Project Description

Caverion is a Finnish supplier of technical building services in all trades, facility services and energy services. Innovation and sustainability play a particularly important role for the company. This naturally applies not only to the company's own performances, but also to its new headquarters in Vantaa. The approximately 450 employees from the Helsinki metropolitan region are brought together in the modern office spaces at one location. New ways of working have been created, including various areas for collaboration, project work, creativity and concentration.

Lindner Group was involved in Global Product Supplies for the new headquarters. Therefore, employees from International Project Contracting began developing a custom canopy ceiling back in May 2017 and it wasn't until a year later that the custom solution became an order. But the patience paid off: the specially developed chilled canopy ceiling impresses with integrated lights and ventilation. The lights are cooled using a patented process. As a result, the ceiling functions in a single closed and interlocking system and stands out for both innovation and elegance.
