

SK90

Protective Box for Built-In Part Round/Square

Besides adapted additional equipment, external fixtures can also be integrated into LMD fire rated metal ceilings. The installation of protective boxes is necessary to maintain the fire resistance class.

- integration of external fixtures possible
- protective boxes required to maintain the fire resistance class

Technical Details

SK90/L

shape of protective box: oblong
thickness of protective box: 36 mm / 60 mm
length of protective box, external dimension: 1,761 mm
length of protective box, internal dimension: 1,650 mm
width of protective box, external dimension: 440 mm
width of protective box, internal dimension: 260 mm
height of protective box, external dimension: 160 mm
height of protective box, internal dimension: 100 mm

SK90/DL

shape of protective box: oblong
thickness of protective box: 30 mm / 60 mm
length of protective box, external dimension: 573 mm
length of protective box, internal dimension: 450 mm
width of protective box, external dimension: 383 mm
width of protective box, internal dimension: 260 mm
height of protective box, external dimension: 310 mm
height of protective box, internal dimension: 250 mm
