

Lindner ECO_N[®] Hybrid Unitized Curtain Wall

An Impressive Combination of Wood and Aluminum

The Lindner ECO_N[®] is the first wood-aluminum hybrid facade system in the Lindner unitized curtain wall series. By combining wood modules with aluminum, it successfully merges economic efficiency with sustainable design. By using wood, we not only create a visual link to nature: The CO₂-neutral wood also has a very positive effect on the ecological balance of the facade. With Lindner ECO_N[®], we also rely on single source materials with the highest recyclability and continue the proven basic design of our hybrid facades: The facade system impresses with clear sealing and functional levels, patented PA pressure strip and special fire protection properties. The system can also be installed quickly and on-time on the construction site thanks to the use of prefabricated, high-quality facade unitized.

- Patented spring clip mounting
- Patented PA pressure strip
- Visible width outside: 3 1/8" (80 mm) [2 x 1 1/4" (32.5 mm) faceplate + 5/8" (15 mm) joint]
- Visible width inside: 3 1/8" (80 mm) wood/aluminum design or 4" (100 mm) wood design
- Very good thermal and moisture resistance
- Integration of aluminum or wood-aluminum opening unitized
- Optional features can be integrated, such as LED modules or various joint designs
- Compatible with the Lindner ECO[®] aluminum system and therefore adaptable to different room uses (e. g. wet rooms)
