

ALLIANZ SUISSE

WALLISELLEN, SWITZERLAND

Description:

The new headquarters of Allianz Suisse is situated on Richtiplatz, a former industrial area adjacent to Wallisellen Central Station. They consist of a multi-storey building and low building, which are connected with bridges. This combination forms a versatile working environment for 1,700 employees. Lindner developed and fitted an especially efficient Plafotherm® heating and cooling ceiling system in the course of this project. In addition to its efficiency, the system also contributes to the interior design thanks to a tree-dimensional structural surface of the type TOUCHdesign.
