

**SAGAFLOR**

**KASSEL, GERMANY**

## Description:

The garden and zoo specialist trader Sagaflor AG had two reasons to celebrate in 2015: the 50 years anniversary of the company and the opening of its new company headquarters. The main reasons for the relocation to the German town Kassel were, according to the company, more modern infrastructure and better possibilities for future expansions.

The interior design of the building is influenced by nature, which is a reference to the brands of the company. This is also why wood plays a very important role as a building material in this building. Lindner was contracted with the installation of glass partition systems, which separate rooms without negative effects on transparency. These systems were fitted with Lindner fire protection doors, upgrading the building's safety standard. Furthermore, Lindner's scope of work also included an extensive number of dry lining works.

## General:

Concept/Product:	Dry lining systems, Partition Systems, Doors
