

RESIDENTIAL AND BUSINESS COMPLEX "143"

BERN, SWITZERLAND

Description:

The former industrial area Ausserholligen is one of the key development areas of Bern. It is being transformed into a modern, environmentally friendly city district. Located in Ausserholligen, the residential and business complex "ARK 143" profits from its central location, proximity to schools and kindergartens, various spare time activities nearby as well as promising future prospects thanks to investments of the city and private investors. The complex consists of two business buildings and to residential buildings.

All together, the complex offers 8,500 sqm of floor space used for business and service providers. In order to efficiently control and adjust the temperature of the business areas, Plafotherm® DS TAS ceilings were installed. The system excels regardless of the chosen field of application in this multi-purpose complex: laboratories, office areas and even the in-house gym.
