

NO 5 ST PAUL'S SQUARE

LIVERPOOL, UNITED KINGDOM

Description:

Lindner produced and installed all six different kinds of facade systems at this project. The whole installation of the facade has been achieved without any scaffolding by using a prefabricated and glazed unitized curtain wall system, consisting of structural-glazing-systems, facade elements with special aluminium profiles and exterior sunblinds. Due to the custom-made design the facade is especially appealing under architectural aspects.
