

Lindner Interiors Limited specialises in the supply, design, manufacture and installation of sustainable ceilings, partitions and raised floors. We believe in conducting business in a manner which achieves sustainable growth whilst demonstrating a high degree of social responsibility.

We recognise that fulfilling our moral, financial and legal obligations to both our internal and external stakeholders will bring significant and tangible benefits to the business.

Lindner Interiors aims to align its Values, Vision and business strategy with the social and economic needs of our stakeholders, whilst embedding responsible and ethical business policies and practices into everything we do.

Lindner Interiors seek to improve the sustainability of its business activities, and reduce its impact on the environment by focusing on three key areas:

1/ People

- Prioritisation of employee health and wellbeing through the promotion of both physical and mental health
- Provision of employment opportunities in partnership with local communities
- Commitment to diversity and inclusion, ensuring all employees are valued and treated equally
- Quality education and training provided to our teams
- Community involvement and support for local organisations and charities

2/ Planet

We have established a Carbon Action Plan to begin our journey to Net Zero. We will focus efforts on our biggest impacts to reduce our consumption of natural resources. This is in our offices, and project locations.

We will educate and communicate with both our internal and external stakeholders to bring a higher level of knowledge of understanding. This will realise greater benefit and bring more positive results.

3/ Procurement

We promote the environmental sustainability credentials of the Lindner products, and provide the information and data required by our clients to enable them to make informed decisions, exceeding expectations on efficiency, environmental, safety, quality, programme and value. Lindner are absolutely focused on the circular economy of its products.

Where we procure through our wider supply chain, we further commit to working with them to lead the innovation of alternative, safe, low impact and value driven sustainable solutions.
