The only alternative to daylight.

Lindner Lights and Lighting Systems.

Lindner

Building New Solutions

Building new solutions.

Lindner undertakes major worldwide projects in all areas of interior finishes, insulation technology, industrial services and building facades. From pre-planning through to project completion Lindner is your partner of choice.

The Company's extensive manufacturing capability enables quality to be strictly maintained whilst allowing maximum flexibility to meet individual project requirements.

Environmental considerations are fundamental to all Lindner's business principles.

Through partnerships with clients Lindner turns concepts into reality.

Choosing Lindner you have:

Lindner Concepts:
Tailored solutions specifically geared to satisfy individual project requirements

Lindner Products:
Quality materials and systems to the very highest industry standards

Lindner Service:
Comprehensive project management services

Let there be light!

For the next best thing after the sun.

How you can benefit with Lindner Lights and Lighting Systems:

- A wide range to fulfil all requirements
- Ready-to-connect light fittings with power supply units and lamps
- Large capacity in-house production
- Integral, coordinated room and lighting concepts
- Minimal interfaces; straightforward co-ordination and logistics
- Total project management including planning and advice

Put your rooms in the best light with our lighting range.

Integrated lights – simple and versatile.

The understated design achieved by integrated lighting is extremely suitable for an architectural lighting scheme. Versatile design means that integrated lighting can be co-ordinated perfectly with your ceiling module or flush-mounted without the need for additional joints, panels or coverings. Frameless lighting modules avoid colour variations on the ceiling. Take advantage of our pre-assembled components, which ensure that there are fewer interfaces and lower installation costs.

CBX Tower, Paris

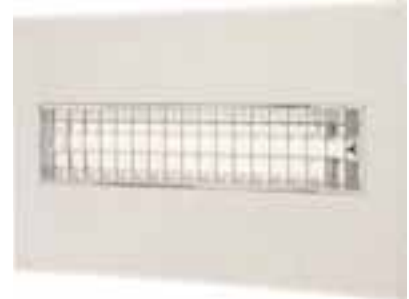

LLP integrated light, Type QU 180

Integration of the frosted downlight into the metal ceiling panel emphasises its subtle design.

LLP integrated light, Type IS 22

High-precision micro-prism cover guarantees evenly-distributed, comfortable lighting of work places and meeting rooms.

LLP integrated light, Type IS 20

Aluminium mirror grid diffusers are highly efficient when it comes to lighting levels and glare control. Optional models for F30 and F90 ceiling elements (T38/20) are available.

Downlights – the lighting all-rounder.

Downlights are suitable for almost all areas of application such as reception areas, shops, hotels, offices, museums etc. They can be integrated into metal ceilings and all other standard ceiling systems either with or without a frame. The direction of the light beam is flexible and the recessed lamps allow smooth integration into the ceiling, emphasising your rooms, not our light fittings.

Luminous canopies – more than just illumination.

With multi-functional ceiling canopies you can achieve different atmospheric lighting effects using different installation methods.

Optional heating and cooling functions provide a comfortable environment. Acoustics are also improved through the sound absorption properties of the light canopy. Even the sun can't offer all that.

Special lights – for individual requirements.

Do you have special lighting requirements? Just give us a call. Lindner develops individual tailored solutions, for example for airports, office complexes, hotels, shopping centres, swimming pools, gyms and outdoor areas.

During the process we fulfil architectural and interior design requirements as well as specific technical challenges. The lighting is planned, developed, produced and installed in close collaboration with the customer. Your personal daylight alternative just the way you want it.

Everything from one source: our comprehensive service.

Planning and evaluation of lighting – support in the planning phase.

Lindner not only provides lighting products but also a fully integral service. A qualitative and quantitative analysis of lighting requirements creates planning security for architects, interior designer and the client. In addition we can carry out graphic lighting analysis of light distribution.

Project development – from the first consultation to handover.

Lindner guides the implementation of your construction and lighting projects from the very beginning. From competent advice and comprehensive planning to logistical control, professional assembly and of course a smooth handover, Lindner is your partner of choice. Trust the number 1 in all areas of interior fit-out – lights and rooms belong together.

We can do it all for you.
