Function meets aesthetics.
How we turn your ideas into reality.
Building new solutions.

Lindner undertakes major projects worldwide in all areas of interior fit-out, insulation technology, industrial services and building facades. From pre-planning through to project completion Lindner is your partner of choice.

The Company’s extensive manufacturing capability enables quality to be strictly maintained whilst allowing maximum flexibility to meet individual project requirements.

Environmental considerations are fundamental to all Lindner’s business principles.

Through partnerships with clients Lindner turns concepts into reality.

Choosing Lindner you have:

Lindner Concepts:
Tailored solutions specifically geared to satisfy individual project requirements

Lindner Products:
Quality materials and systems to the very highest industry standards

Lindner Service:
Comprehensive project management services
Strikingly beautiful!

Convincingly high-class interior design solutions.

Lindner know-how for your project:
- Integrated concepts for your construction project
- Individual designs
- Own research and development department
- Products from our own manufacturing facilities
- Everything from one single source
You have the vision. We’ll make it real.

Three Lindner business areas under one roof: Lindner Objektdesign GmbH.

Lindner Objektdesign GmbH is an independently operating company within the Lindner Group.
The three business areas
- Interior Fit-out and Furnishings
- Cruise Liner and Ship Fit-out
- Hotels and Resorts
make use of decades of practical experience. In close cooperation with investors and their architects, we not only supervise the complete interior design of large special projects, we also install everything ourselves: from complex fittings through to individual pieces of furniture.
Function and ambience: discover the diversity of our range of services.

Modern architecture combines functionality and aesthetics with the greatest safety possible. Our designers, technicians and engineers ensure the perfect conversion of your ideas – so that there are no limits to your creativity.
Inspiration enables innovation. Lindner R&D.

Lindner Research and Development.

Ready for the exceptional:
- Individual concepts to your wishes
- Special solutions for design, statics, acoustics, fire safety
- Wide-ranging expertise
- Highest demands on quality and aesthetics

Everything is always under control. Lindner test labs and workshops.

Each of our projects satisfies the highest demands on design, statics, acoustics and fire safety. Our Research and Development department operates high-performance test workshops and has its own TÜV-certified test labs. This is where we test the properties of our new developments with respect to building physics and match the products to your individual needs. Which is why we can react quickly and safely to your special wishes.

Campus Westend II
Integrated concepts for intelligent processes.

We are by your side as an experienced partner in every phase of your project. Numerous highly-specialized experts as well as innovative technologies permit the implementation of even the most unusual of ideas.

Perfectly organized: with Lindner project support.

We plan the complete project management together with you and draw up an absolutely efficient support plan. This minimizes your coordination work and avoids frictional losses. We will be happy to help you within the scope of an active partnership, right through to a turnkey execution, with application-optimized Lindner Concepts, proven Products and bespoke Services. Because we want to assist your project entirely to your individual wishes, you can commission as many or as few of our services as you want.
Trust in a strong partner.

We provide you with everything from one single source. This means that you benefit from the handling of all services by a financially strong partner, minimized interfaces and optimum flexibility, so that exceptional ideas can be carried out in next to no time.

Customer

Contractual partner: Lindner

How we implement your special requirements.

We put together a separate project team who are individually attuned to your construction project and who define and control all processes centrally. As your direct point of contact, this team guarantees that the project standards, budgets and deadlines are met in accordance with the strict stipulations of our integrated quality management system through ongoing checks. We provide experienced procurement specialists to help plan the project and highly qualified CAD design engineers for the technical interpretation of your wishes. Various corporate divisions such as R&D or our central procurement department also provide assistance if and when this is needed. Our site managers are always present and coordinate the work – making sure that everything goes smoothly.
For cutting-edge components: Lindner Production.

Lindner develops and manufactures customized products which will bring your concepts to life. This way, we can guarantee that wood does not burn and new floors can be walked on after only one day, for example. Because our motto is: anything is possible.

High quality from our production units.

Thanks to our numerous production units, all of the products are readily available. Special designs and customized fittings are manufactured in our in-house joinery in Arnstorf and by our subsidiary Lindner Mobilier s.r.o., for example. That’s why we welcome in particular your unusual ideas which we can fulfil for you quickly and accurately. Permanent quality controls in all production units ensure that you profit from the highest product safety at all times.
Born out of experience: Lindner composite materials.

These Lindner products are characterised by their outstanding building physics properties – thus giving you maximum flexibility for your interior design. They are not simply a combination of different materials; rather, their unique compound structure satisfies different requirements, such as fire safety, acoustics and design. They are produced in a certified process in our own production units.

Real wood for the best result: Lindner PUREline

The PUREline surface technology allows the production of metal panels and structural components that are finished with real wood veneer. Thanks to these wooden surfaces, the proven Lindner aluminum systems retain their lightness with very good fire safety properties. The advantage: you can even use components with this design where the requirements on statics and fire safety rule out the use of solid wood. Positive practical experience led to the systematic development of further composite products.
World flyweight champion: Lindner COMP+

The high-quality sandwich elements consist of an aluminum honeycomb core and top layers in various designs. Choose between COMPlacq with varnished, COMPprint with printed and COMPwood with real wood veneer surfaces on aluminum sheets or COMPdecor with HPL surfaces. Thanks to COMP+, large-size components can be built in a weight-saving design – for example suspended ceiling panels, wall covering in maritime fit-out or decorative elements with curved edges. Apart from flat, rigid panels, the range of products also includes curved/arched panels and column trims. The alternatives with perforated aluminum top layers for improved room acoustics also make for a unique combination of features. Another weighty advantage: the non-combustible backing materials mean that COMP+ has first-class fire safety properties.
Fire safety in a package: panels with real wood veneer.

So that even A2 requirements don’t spark things off:
Lindner FIREwood

FIREwood stands for a range of composite fire safety panels, right through to non-combustible, ready-to-fit panels.
You want to finish rooms in real wood and at the same time have to satisfy high fire safety requirements such as „low-flammability“ or „non-combustibility“?

Simply decide on Lindner FIREwood: you can then use all kinds of real wood veneers even in large rooms, such as assembly rooms or school buildings, as well as along escape and rescue routes despite strict fire safety regulations – because the composite panels with a fibre-reinforced gypsum core do not burn and are also available sound-absorbing on request. For us, it doesn’t matter if the project is in Germany, Europe or even further afield.

FIREwood is a successful combination of fire safety, acoustics and elegance.
Our products – at your avail.
Lindner Product Supplies.

Do you need some special components or are you interested in one of our innovative products? We will be happy to develop and supply bespoke solutions for your project so that you can implement even exceptional ideas. Of course, you won’t just get the product but also our tried-and-trusted Lindner know-how – because we provide extensive advice on your project-related requirements with respect to delivery and installation.

We offer high-quality solutions.
And proven ones.

Our widespread national and international delivery business ensures the fast availability of all of our products. That’s how we give your project planning maximum flexibility with a reliably high quality.
Naturally sustainable.

Lindner has devoted a separate business to this claim since 2009 – Green Building.

Lindner has many years of experience in the fields of hotel as well as office and administrative buildings with projects involving the commonly used certification systems BREEAM, LEED and DGNB. It’s no coincidence that therefore Lindner was responsible for the complete finishing in the first DGNB-certified hotel in Germany: the Scandic Berlin Potsdamer Platz.

The Green Building team accompanies projects throughout the entire construction phase. The processes during production and on the construction site are hereby optimised with a view to sustainability; suppliers and manufacturers are systematically integrated in the improvement of the Green Building processes and the documents and records needed for certification obtained.

The constant reduction of CO₂ emissions, low-emission production steps, waste- and energy-oriented optimisation in our production units have long been an avowed goal within our Integrated Management System IMS. A cross-company life cycle assessment controlling system has been an integral part of this since 2012.
Freedom of choice in architecture.

If rooms have a representative task, the perfect blend of function and aesthetics is particularly important. We prepare an integrated concept together with you for the perfect conversion of your wishes, for example with respect to acoustics and furnishing. What’s more, we provide all of the other services from one source too – for particularly efficient processes with no superfluous interfaces.
We love institutions. Cultural institutions for example.
With our wealth of experience and know-how, we are happy to take on the high-class finishing of your cultural and educational institution. Architect’s designs and building physics specifications are implemented in exactly the way you want. This begins with wall and ceiling covering, fixtures and furnishings, right through to auditoriums and complete concert halls – on land and at sea.
Full speed ahead for your imagination: Lindner Maritime.

Discover the unique diversity of Lindner – for maritime fit-out too.

We can offer specific know-how, development and design as well as sophisticated special products from one source for your ship project – as an all-in-one solution for all public areas. In this way we help turn even unconventional ideas into a reality.

What’s more, we supply other companies at the shipyards directly with high-quality products from our own manufacturing facilities.
Keeping you on the crest of the waves: Lindner Products.

Discover our extensive range of products that have been specially developed for maritime fit-out.
We can offer you metal ceilings, panel constructions as well as hook-on and clip-in systems, amongst other things; these can also be swing-down type, if required. Special lightweight systems are available for partition walls and wall covering. All of the elements can be ordered in various designs and in the dimensions you require.
Would you like to learn more about Lindner Maritime? We will be pleased to send you more detailed information.

Beautiful at night. But in the daytime too: Hotels and Resorts.

Anyone visiting an unfamiliar place wants to feel at home in their hotel – day and night. If the ambience goes down well with guests, they feel perfectly comfortable.
Lindner Hotels and Resorts covers the entire range of services that have to be rendered for interior fit-out in the field of hospitality during every phase of a project. Our goal is to provide precisely those services that lead to the best result for the customer in cooperation with everyone involved on site.

Parquet flooring, special ceilings, wall covering, partition walls and doors, special built-in furniture (p. 24/25 middle, p. 26 left)
By and large: you entrust us with your plans – we render the desired chain of services. For your hotel.

In addition to our core business of interior design, joinery services as well as FF&E packages for rooms and public areas, we also take care of other tasks if necessary, right through to a finished hotel. The manufacturing network in our corporate group covers all topics for the interior fit-out of large-scale projects.
Lindner gets things done: to the point.

We measure ourselves against results.

All of the employees involved in a project have frequently demonstrated their profound know-how in practice. But they don’t forget the details, no matter how complex the task. Because we expect you to take a good close look.

Our name has been linked to many demanding and well-known projects over the past decades. This could be an overall service, an individual trade or one of our numerous products: we stand by our work and bring this to a convincing end to your complete satisfaction.
We can do it all for you.
