

MAISON DU LIVRE

BELVAL, LUXEMBOURG

Description:

As the new library of the University of Luxembourg, the Maison du Livre is the future core of a site which has gradually been converted from an industrial area to a university campus. Lindner was involved in providing raised floors and partition walls. A particular challenge was adapting the floors and walls to the existing structure as well as to the unusual shape of the new, conical facade. Numerous custom-made products were used in addition to partition and floor systems including door elements, studio glazing, a walkable glass roof and conical facade connections.
