Architecture:	Ateliers Jean Nouvel
Company Division:	Lindner France SASU, Lindner SE   International Projects Contracting
Achèvement:	2011 - 2015

## Description:

The Philharmonie de Paris is Lindner's latest work with regards to concert halls. It is situated in the Parc de la Vilette, where it adjoins other music-themed buildings, forming the Cité de la Musique. Apart from the Grand Salle, with a volume of 2,400 seats for visitors, the Philharmonie de Paris has numerous other halls and spaces for concerts, rehearsals and conferences, amounting to a total floor space of 33,000 sqm. Its design transcends from an angular exterior into curving forms of the interior, which lead into the Grand Salle.

Lindner was chosen as the general contractor for the interior fit-out of the building. In collaboration with their local entity Lindner France the project was successfully completed in 2015.

Over the years, Lindner has developed an expertise for concert halls, which can also be found in this extraordinary Philharmonie with acoustically high-quality interior design. But also the external areas outside the hall impress with their unusual style as it is shown on the example of the "Fakir" ceiling. This is one of the numerous highlights of this project, which was used for both interior and exterior and had been developed specially for the Philharmonie de Paris.

## Produits mis en oeuvre:

### Systems

- Wall claddings
- Exterior ceilings
