Cathedral of Christ the Light

Oakland, United States

Lindner

Project Description

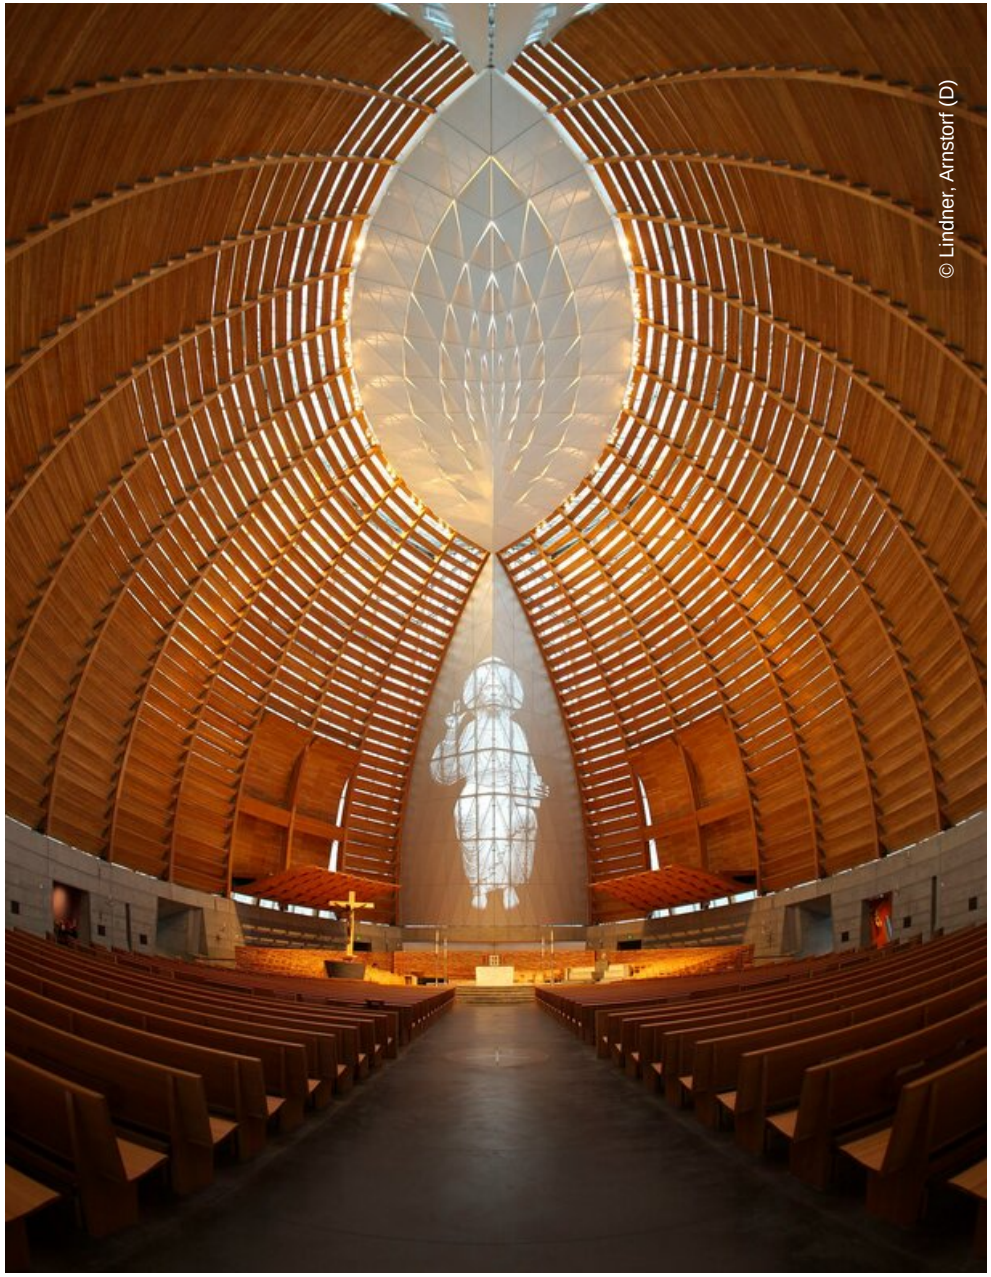

Christ Cathedral arose from the Crystal Cathedral, which was in need of renovation mostly due to the interior environment. While there were no major changes to the exterior, the interior of the church was significantly upgraded and redesigned with special wall and ceiling coverings. Triangular LMD-S metal panels are arranged in a complex pattern to create the look of quatrefoil ornaments. They conceal the entire surface of the glass facade from the inside, addressing acoustics, lighting, regulation of solar radiation, ventilation as well as visual comfort and visibility.
