

arabeska - Restaurant Leonardi

Munich, Germany

Project Description

With the completion of the new construction 'arabeska' in 2015, Munich's HVB-Tower acquired an unusual new neighbour. Following a construction period of three years, this multi-purpose building now features flowing shapes, light-flooded liberality and ornamentations of Arabian architecture, which lend the building its name. The facility consists of a main building and an adjoining structure. The ground floor of the main building is composed of a large-scale central atrium surrounded by event and conference areas and a restaurant. The upper floors are designed for housing office spaces. As to the adjoining structure, a training and conference center of a household appliances manufacturer has been established in these premises.

The restaurant Leonardi and its coffee shop are a popular meeting place among the staff and visitors of the arabeska complex. It offers a wide range of freshly made dishes for breakfast and lunch, while also catering to events of all sizes. Leonardi's strengths are not only in the culinary sector, the restaurant is fitted with high-quality furnishings and a flexible spatial concept that adapts to individual requirements. The interior of the restaurant features numerous wooden elements, including parquet flooring with FLOOR and more® hollow floors forming the substructure. Wood, being a natural material, underlines the fine appearance of the restaurant and gives it a warm touch. Due to the elevated levels of moisture, the kitchens have been fitted with FLOOR and more® hydro and a waterproof coating.

Completed Works
