

Specialist Clinic Hornheide

Muenster, Germany

© samba photography

Project Description

The specialist clinic Hornheide is an interdisciplinary and national center for the treatment of tumors of the skin, the head and neck area as well as surgical reconstruction. The hospital near Münster is the largest skin cancer center in Germany.

As part of a restructuring, the hospital set up a new surgical area. In cooperation with the project controllers of FAC'T GmbH, the clean room specialists of Lindner AG implemented ten ORs and their ancillary areas. Lindner Reinraumtechnik created spatial separation through operating walls, in which sliding and steel doors were integrated. In addition, clip-in ceilings were installed on a large area. The walls and ceilings serve as housing for the building services. In addition, the walls have been upgraded with special solutions, including integrated viewing windows with blackout function and operating room terminals.
