HPI, New Institute Building

Potsdam, Germany

Project Description

The Hasso Plattner Institute for Digital Engineering is a privately funded IT institute and faculty of the University of Potsdam. To expand its capacities, a modern institute building was built on the Griebnitzsee campus. With space for office use, teaching and research, meeting and project rooms as well as technical areas, it meets modern and functional requirements.

In the course of this construction project, Lindner was responsible as general contractor for the interior fit-out. This included the coordination and execution of numerous fit-out trades such as dry construction work or the installation of bespoke Corian washbasins as well as the assembly of products from the Lindner Group range, such as glass partitions of the type Lindner Life Freeze 137 with integrated doors and wooden doors.
