

Schön Clinic Hamburg-Eilbek, New OR Centre

Hamburg, Germany

© Hauke Müller

Project Description

With over 750 beds, 55,000 patients a year and 1,800 employees, the Schön Klinik Hamburg-Eilbeck is one of the largest hospitals in Hamburg. The clinic reorganized its processes with a newly built central operating theatre building. The two-story building combines 12 operating theatres and their secondary areas, including recovery rooms, operating room changing rooms and a central sterile goods supply department (CSSD), under one roof. This created a state-of-the-art operating center with short distances, which contributed to the clinic's "World's Best Hospitals 2019" award.

The clean room technology department of Lindner SE has equipped the operating theatres with doors and partition systems as part of this construction project. Depending on the requirements, both sliding and swing doors were installed, which allow access to the halls. Lindner installed powder-coated operating wall claddings inside the theatres, in which various glazings and fixed installations are seamlessly integrated.

Completed Works

- **Clean Room**
 - Hinged doors12 Pcs.
 - Sliding doors12 Pcs.
 - Partition systems OT1000 sqm
 - Partition systems glass24 Pcs.
