Generali Tower

Milan, Italy

Lindner

Lindner

Project Description

The Torre Generali (Generali Tower) in Milan is an office building and the third tallest skyscraper in the city and country after Torre Unicredit and Torre Allianz. In the vernacular, the tower is also known as Lo Storto (The Twisted) due to its twisted appearance. The building has a height of 177 metres and provides offices for the Italian insurance group Assicurazioni Generali on 44 levels.

The tower was extensively equipped with Lindner raised floors of the NORTEC type. This solution made it possible to cleverly conceal technical installations and cable routes in the floor cavity in order to gain greater architectural freedom. Suitable outlets were created in the required places. Furthermore, the floor can be opened at any point, which facilitates maintenance work. An attractive finish is achieved with floor coverings applied on site.

General

Building Type	Office Buildings, Industrial and commercial construction
Company Division	Lindner SE I Interior Product Supply
Completition	2018 - 2019
Architect	Zaha Hadid Architects
General Contractor	C.M.B. Cooperativa Muratori e Braccianti di Carpi
