Project Description

The innovation centre of the precious metals and technology group Heraeus is located at the company's headquarters in Hanau. Lindner was commissioned with the complete interior fit-out of the building, whose architecture stands for openness and transparency and has a favorable effect on meeting and communication. Lindner formed a working group with Caverion, who were responsible for the building services. The four-storey innovation centre covers an area of approximately 15,000 m² and provides jobs for 200 developers. However, this is only a part of the planned construction work on the company's premises: a "Heraeus Technology Campus" is also being built in Hanau. This will be subdivided into areas for administration, development, production and logistics.
