# Project Description

The building complex in Rue Grenelle, situated in the 10th arrondissement of Paris, was initially erected in 1950 for the purpose of creating social housing and offices for state administration. A complete modernisation was carried out, through which modern office environments found their entrance into the building, leaving only its main structure in its original state. The old construction also brought a few challenges, including low room heights. Lindner France SASU installed raised floors of type NORTEC in the entire 10 Rue Grenelle.

# General

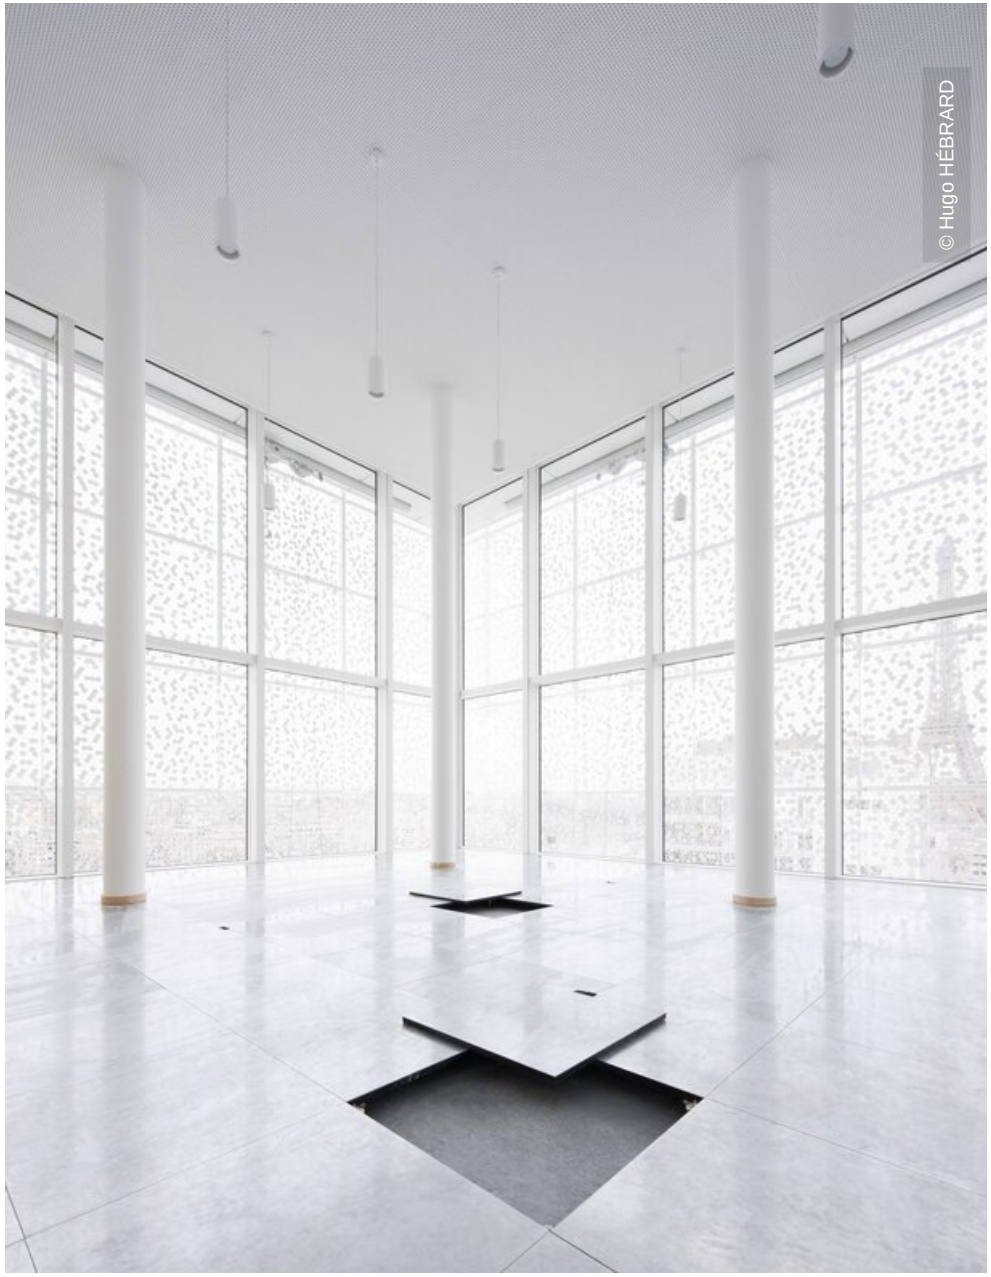

| | |
|---|---|
| **Building Type** | Facilities for Meetings, Conventions and Conferences |
| **Company Division** | Lindner France SASU |
