Project Description

The Gnigl Education Campus sets new standards for modern education. Children aged three to ten are cared for in the promising educational institution in the Gnigl district of Salzburg: Around 100 kindergarten children and 450 primary school pupils have found a common home here. The boys and girls meet in spacious common rooms, including a dining room and a library, as well as in the extensive park. For the special feel-good factor, the architects from Storch, Ehlers & Partner (SEP) relied on light-flooded rooms and warm wooden elements.

The Lindner Group installed approx. 4,400 m² of the CAVOPEX hollow floor system. The wet hollow floor with liquid screed top layer enables jointless floor surfaces that are quickly installed and easily bridge various installations. The excellent structural-physical properties make the floor system perfect for children to romp around and have fun.

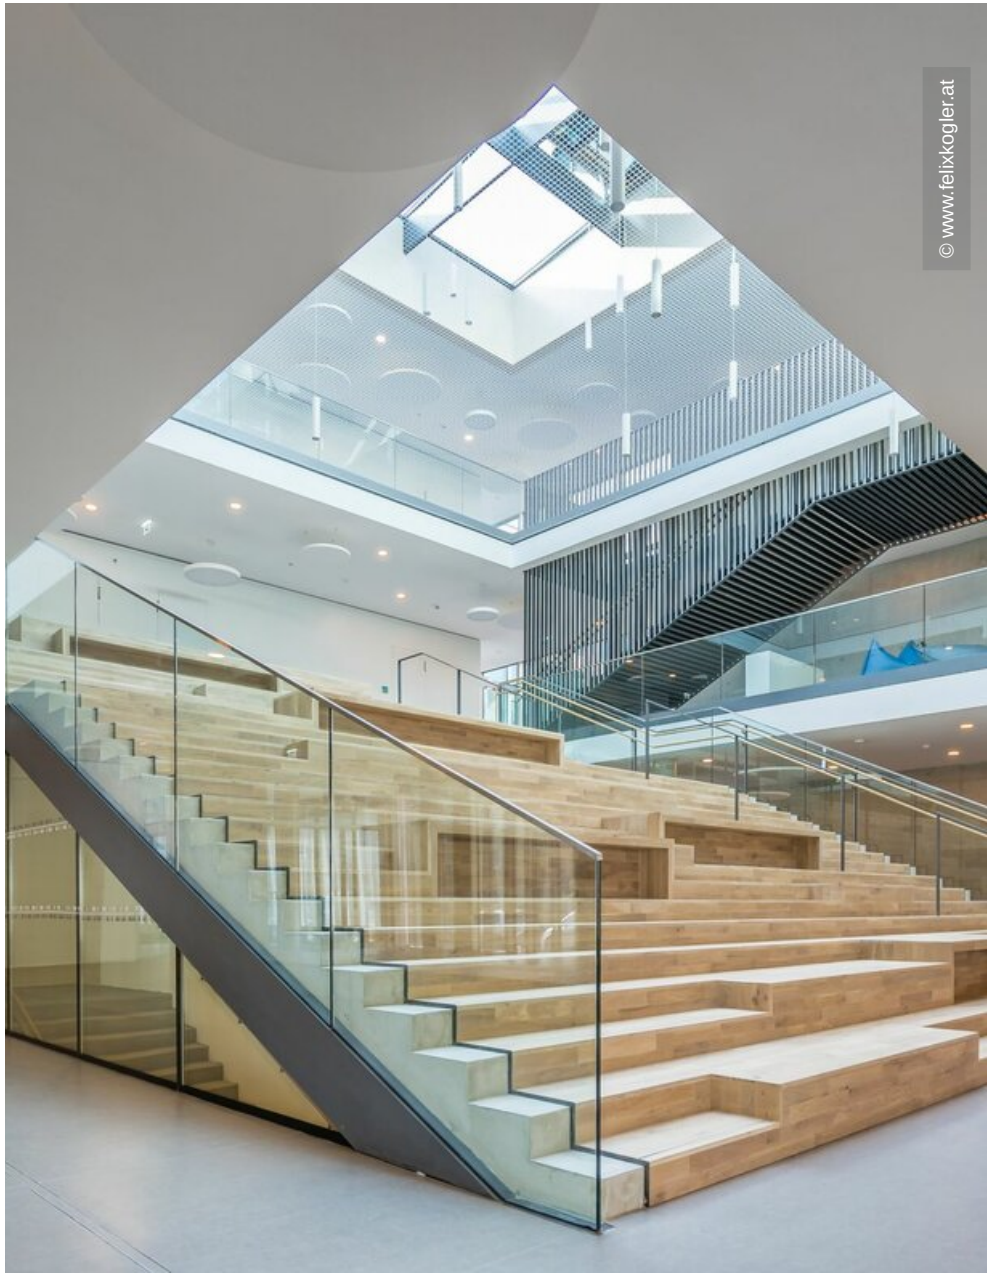

General

Building Type	Universities and Higher Education Buildings, Schools, Public and institutional buildings
Company Division	Lindner GmbH | Doors
Completition	2017 - 2020
Construction Management	Strabag AG

Completed Works

- **Floors**
