Project Description

Finnish spirit meets cosmopolitan casino atmosphere at Casino Tampere: In addition to the particularly responsible gambling environment in the European casino world, the gaming venue stands out above all for its unique look. This is because the casino embodies the Finnish ideas of openness, responsibility and interaction – and all of this in a modern, bright look.

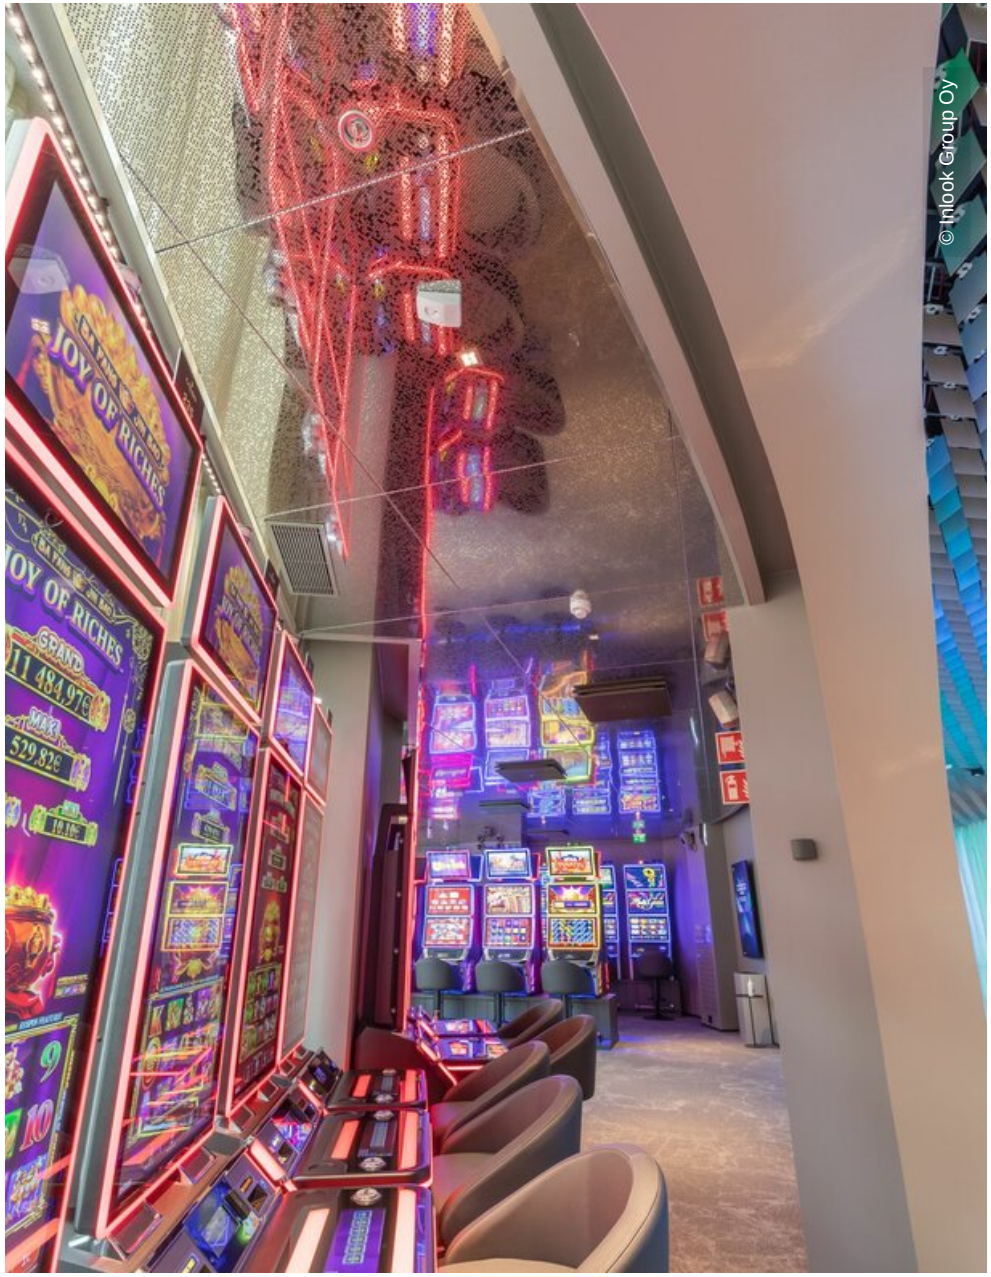

The Lindner Group also made a significant contribution to this with a project-specific ceiling solution: The ceiling system of mirrored cassette elements gives the building a futuristic touch. Thanks to the mirrored look, the room appears brighter, larger and more open. Furthermore, the noble design creates a feel-good atmosphere for the visitors, who, in addition to the casino, also find a sports venue, a railway station and a hotel in the Nokia Arena in the city centre of Tampere.
