Project Description

To improve the reception of passengers on intercontinental flights and meet current standards, Geneva Airport's long-haul terminal from 1975, which was supposed to be only provisional, was replaced by a new pier, the so-called ‘East Wing’. Designed for wide-bodied aircraft and connections outside the Schengen area, the east wing helps to strengthen the airport's international presence. The new handling areas have a modern infrastructure and improved security for flight operations.

Lindner SE's Swiss branch in Opfikon supplied and installed various floor systems in the so-called “Aile Est”. Covering almost 13,000 m², the FLOOR and more® hollow floor system provides space for important installations and cables, as well as effective fire and smoke protection. The NORTEC raised floor made of calcium sulphate also ensures a high load-bearing capacity and excellent sound insulation. All Lindner flooring systems installed have a Cradle to Cradle Certified® Silver certificate and therefore support the sustainable construction of the building with circular products.

General

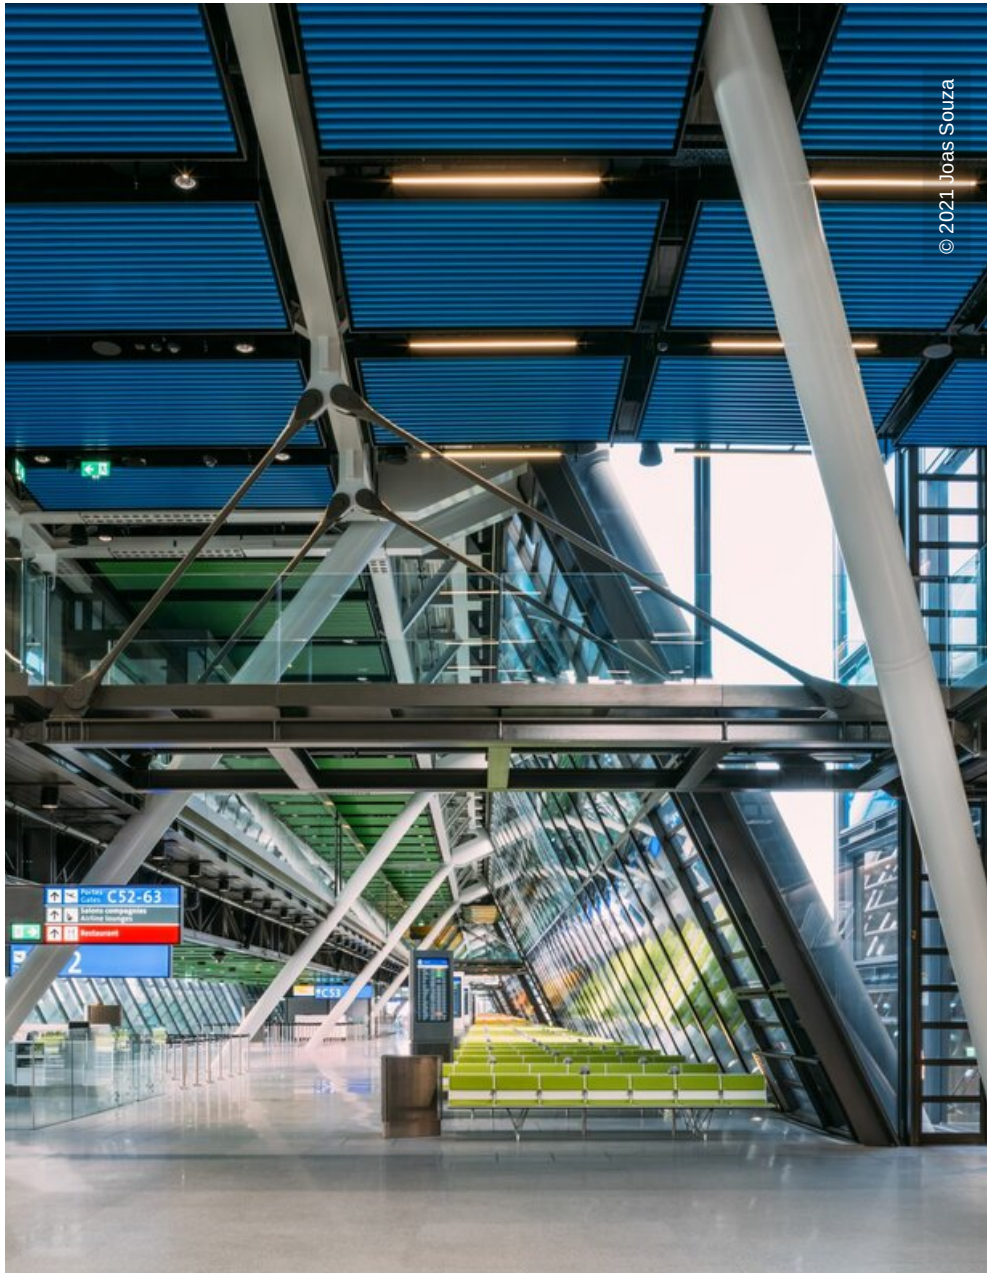

Building Type	Airports, Transportation Structures
Company Division	Lindner SE Arnstorf | Branch Opfikon
Completition	2019 - 2021
Architect	RSHP
Client	HRS Real Estate AG

Completed Works

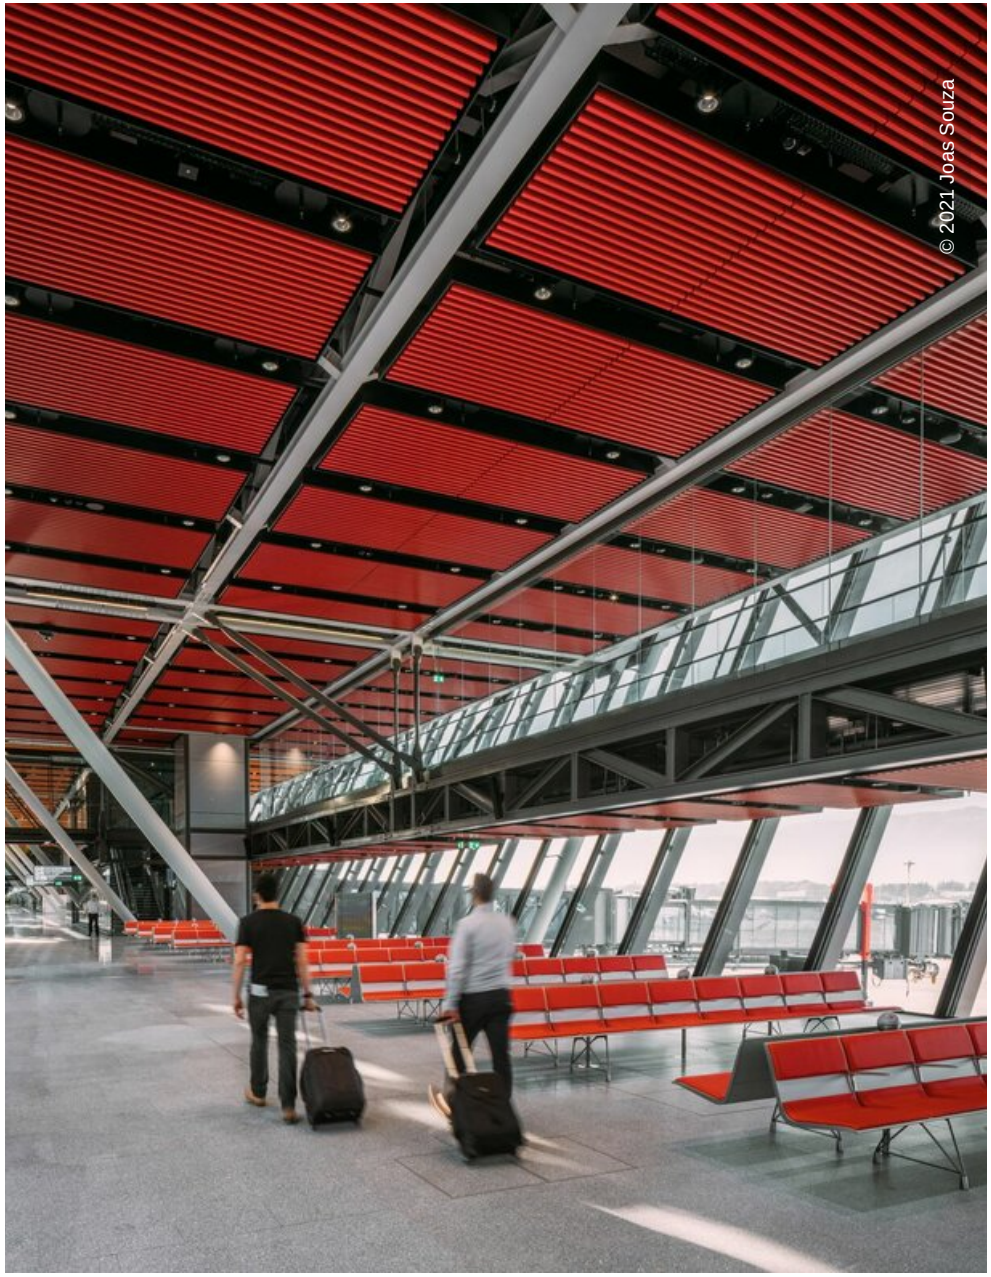

- **Floors**

  Calcium Sulphate Panels

FLOOR and more®	12913 sqm
NORTEC	2153 sqm
