Project Description

The exceptional event venue wolke19 in the Ares Tower combines breathtaking views over Vienna and the Danube with modern and versatile spatial design across three levels. Whether for professional business events, private occasions, or elegant celebrations, wolke19 provides the perfect setting for any occasion with its variety of meeting and event rooms, a spacious foyer, and a rooftop terrace.

The Austrian branch Lindner Baden GmbH played a pivotal role in the redesign of this unique location, successfully completing the project on schedule despite a tight timeline. The venue was ready just in time for an exclusive wedding high above Vienna's rooftops.
The Plafotherm® B 100 chilled ceiling system ensures a comfortable indoor climate in the event spaces, seamlessly integrating into the elegant design with its clean lines and homogeneous ceiling appearance. The integrated BREL 100 post cap luminaires provide effective and flexible lighting.

In the main hall, specially crafted custom post cap grids with a width of 60 cm were used. These, combined with a steel enclosure, create space for professional stage lighting.

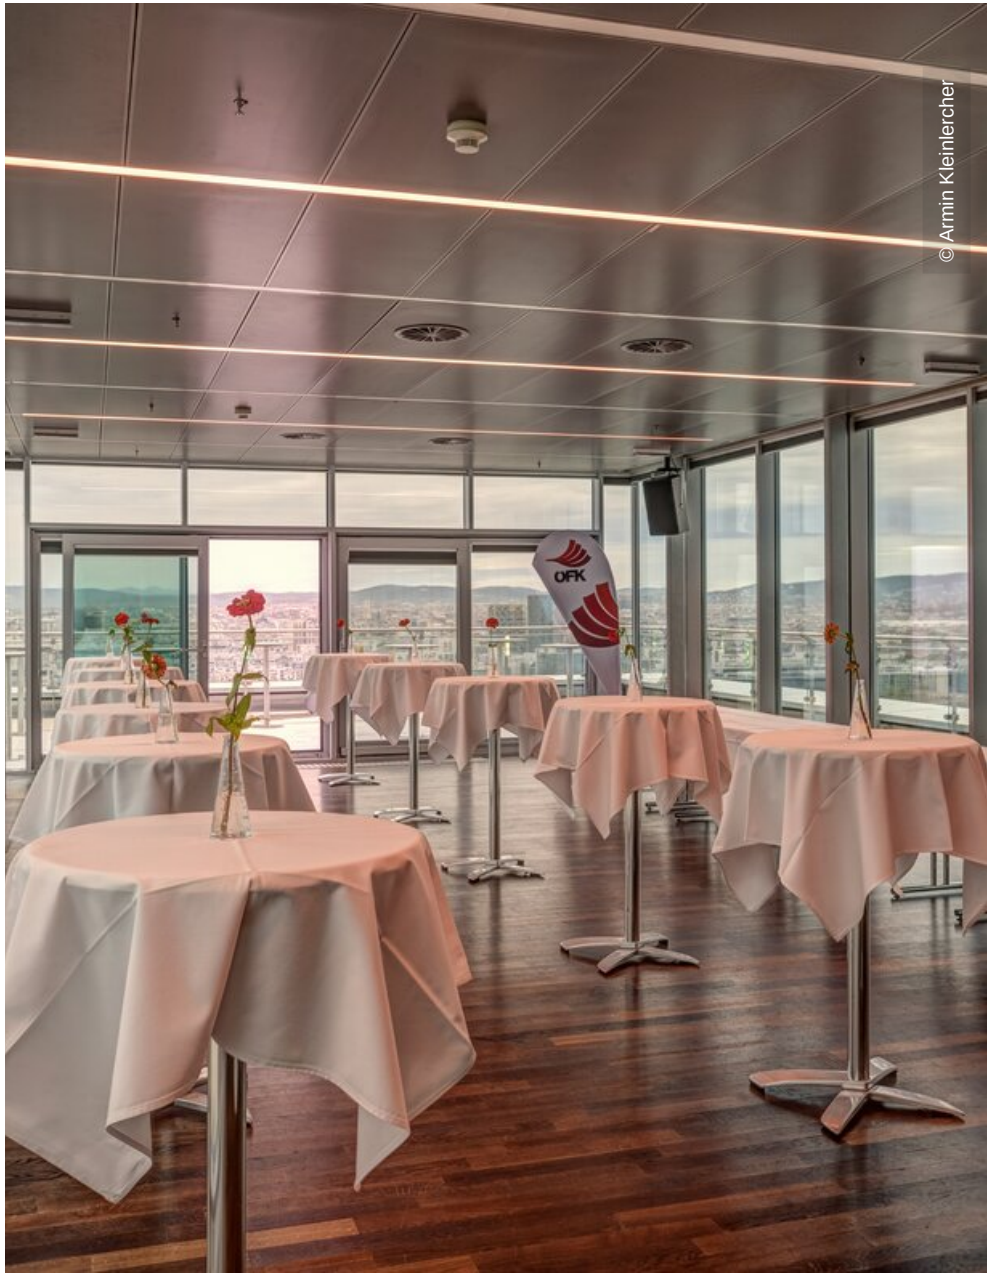

Particular attention was given to the design of the restroom areas. A gold-coloured floor and wall coating with metallic accents create a luxurious and refined aesthetic, which is particularly highlighted by our LMD-L 608 baffle ceiling with the LED LShine baffle luminaire.

General

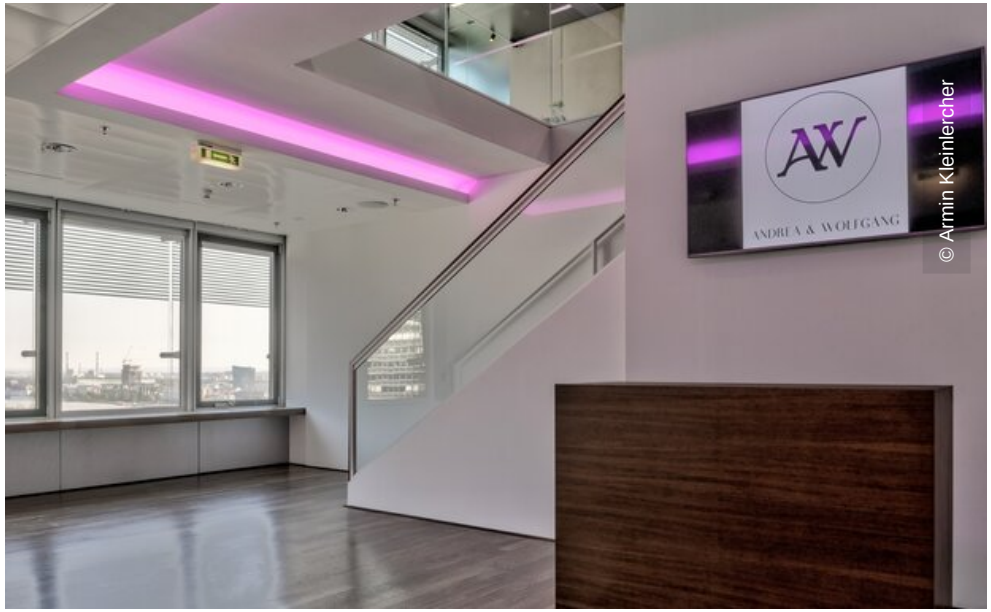

Building Type	Function rooms
Company Division	Lindner GmbH | Doors
