

# **ZOLLNER Elektronik Kft.**

Vác, Hungary

# Project Description

With 25 locations worldwide, Zollner Elektronik AG is a leading provider in the field of Electronics Manufacturing Services (EMS). To meet the growing demands of the industry, a state-of-the-art cleanroom area was established at the Vác site in Hungary. This expansion enables production processes to be carried out under strictly controlled conditions at the highest technological level.

For this project, Lindner Clean Room Technology was responsible for the interior fit-out of the cleanroom, while the installation was carried out in collaboration with our long-standing local installation partner. To allow for flexible room configuration, the Multiclean CLVT cleanroom partition wall, a modular wall system, was used. This system partition wall is complemented by the Clip K3 cleanroom ceiling, which ensures an airtight seal while also allowing for easy maintenance of the technology installed above.

SH-LED cleanroom luminaires provide optimal lighting conditions, while the Swing MPH cleanroom doors, in combination with the Inline 2 locking system, ensure secure, contamination-free access control.

To regulate the cleanroom climate, Filter Fan Units (FFU) were installed, providing a constant supply of filtered air, supported by a high-performance heat exchanger for precise climate control.

## General

Building Type	Clean rooms (electronics and semiconductor technology), Factories and production facilities
Company Division	Lindner SE   Clean Rooms

Completion	2024
Client	ZOLLNER Elektronik Kft.

## Completed Works

- Clean Room
  - Partition systems 100
    - Multiclean CLVT
  - Clip-in cassette systems
    - Clip K3
  - Integrated lights
    - SH LED-H
  - Hinged doors
    - Swing MPH
  - Supply air
    - Filter Fan Unit (FFU)
  - Door interlocking systems
    - Door interlocking system Inline 2
