Project Description

Quantum class cruise ships are among the largest and most expensive ever built. These ship´s 4200 passengers may spend their time visiting one of the countless attractions including a parachute jump simulator and bumper cars, or just take a stroll along the on-board promenade called the Royal Esplanade.

The Royal Esplanade impresses with numerous shops and restaurants, catering to every taste and preference one may have. Each shop and restaurant has a unique design and choice of materials, which made the planning, construction and implementation of the interior fit-out a demanding task. When MEYER WERFT looked for a capable partner for the fit-out of the Royal Esplanade on the lead ship of Quantum class, the Quantum of the Seas", and its sister ships "Anthem of the Seas" and "Ovation of the Seas", the experience and expertise of Lindner Objektdesign´s Ship fit-out Division convinced the decision-makers. The Quantum of the Seas also features the first bumper car floor at sea, named "SeaPlex". It is fitted with extra light cladding elements by Lindner.

General

Building Type	Ship Interior Fit-out, Others
Company Division	Lindner SE | Interior
Completition	2014 - 2016
Client	Royal Caribbean International
