

Acoustic Optimisation of LG TeleCom Office Building

Simbach, Germany

Project Description

For the acoustic optimisation of the LG TeleCom office building in Simbach near Landau, custom-made **MUTE+® board absorber** were used. The aim was to create an acoustically optimised yet brand-strong working environment – a goal that was fully realised through tailored Lindner solutions.

Individual Acoustic Solutions with Custom MUTE+® Products

For the installation, project-specific MUTE+® wall absorber were produced in customised formats, bespoke colours, and with personalised lettering. By combining functional soundproofing with aesthetic design, a unique spatial concept was created that not only improves room acoustics but also reinforces brand identity.

A particular highlight is the integration of the LG TeleCom company logo directly onto some of the acoustic elements. In this way, the MUTE+® wall absorbers become part of the visual identity and support corporate branding throughout the office space.

Design Meets Acoustics – For Modern Workspaces

The MUTE+® absorbers were manufactured and supplied by Lindner, while the client carried out the installation themselves. In the office areas and meeting rooms, the elements now provide a pleasant acoustic environment, reduce reverberation times, and create an overall calmer working atmosphere.

Great attention was also paid to achieving a harmonious overall appearance: the colour scheme and material selection of the acoustic absorbers were precisely coordinated with the building's interior design. The result is a cohesive interplay of modern architecture, acoustic functionality, and brand-specific styling.

General

Building Type	Office Buildings, Industrial and commercial construction
Company Division	LEX Beschläge und Baubedarf
Completion	2025
Client	LG TeleCom Telekommunikation & Computer GmbH

Completed Works

- Sound absorber
