

Unicity Luxembourg – Auditorium Interior Fit-Out

Luxembourg, Luxembourg

 **Lindner**

Project Description

Unicity in Luxembourg is a modern mixed-use development located in close proximity to Luxembourg City's railway station, combining offices, residential units, and retail space under one roof. With its gold-hued facade, Unicity stands out as a distinctive landmark and symbol of the station district's renewal. The integration of living, working, and shopping encourages interaction, encounters, and a vibrant urban environment.

Architecturally, Unicity consists of two independent buildings connected by a surrounding esplanade. Green terraces and open communal areas bring nature to the forefront and invite people to linger. The white-clad building is primarily dedicated to residential use, complemented on the ground floor by retail units. The main building, with its golden facade and central glass atrium, serves as a communicative hub for work and social interaction, offering space for offices, conferences, exhibitions, and relaxation areas.

Interior Fit-Out: Small Auditorium

As part of the Unicity Luxembourg project, the Lindner Group was responsible for the high-quality [interior fit-out](#) of the small auditorium in the main building. The aim was to create a functional event space with a high standard of comfort and usability.

A central feature of the fit-out is the hollow floor FLOOR and more® arena, installed by Lindner, which ensures optimal visibility and usability. The [raised floor system](#) combines stability and solidity with a lightweight construction, allowing for rapid installation while offering high load-bearing capacity – ideal for a flexible and durable event space. A light

grey textile covering was applied to the floor, enhancing walking comfort and significantly improving the room's acoustics.

The tribune area is complemented by [wall cladding](#) in light wood, giving the auditorium a warm and inviting atmosphere. Indirect backlighting integrated at the upper level highlights the wooden panels and creates a soft, even illumination throughout the space.

General

Building Type	Office Buildings
Company Division	Lindner Luxembourg S.à.r.l.
Completion	2025
Client	Thomas & Piron

Completed Works

- **Floors**
Calcium Sulphate Panels
FLOOR and more® arena
