

A long, bright hallway in a modern school building. The walls are white, and the ceiling is a white, perforated acoustic ceiling with recessed linear lighting fixtures. The floor is a light-colored, polished concrete. On the left side, there are several light wood doors with black frames and glass inserts. The hallway leads to a larger area on the right with a wooden bench and a large window.

NEUE SCHULE WOLFSBURG, EXTENSION SEKI

WOLFSBURG, GERMANY

Description:

Established in 2008, the "New School of Wolfsburg" is a showcase project for a new education concept with intertwined primary and secondary school that supports individual talents of children and adolescents, which also sees the integration of external experts and places of learning.

The new construction of the secondary school's level 1 houses class rooms for several subject areas as well as the school administration and a central event area called the "common centre". When the building's concept was drafted, great emphasis had been laid on creating a friendly, motivating and open learning environment. This endeavour can be found both in the open and transparent design of the construction as well as in the modern class rooms with professional equipment.

The interior design was reduced to calm and harmonious materials, including glass, concrete and wood. Class rooms become transparent through the integration of room-high Lindner Life Stereo 125 Glass Partitions with triple glazing, fitted in a black circumferential aluminum frame, setting colourful accents in an otherwise mostly clear wall design. These systems are combined with massive wooden doors and frames as well as glazed doors with aluminum frames.

As demanded by school construction regulations, the doors and partitions are in accordance with sophisticated fire, smoke and noise protection standards. The same applies to spandrel glazings and windows that have been integrated in walls with connection to the central atrium and between classrooms and hallways.

General:

Concept/Product:	,
Building Type:	/
Client:	City of Wolfsburg
Architecture:	Work Phases 1 - 4: Kirstin Bartels ARCH
Company Division:	Lindner SE Interior Fit-out and Furnishings, Lindner SE Partitions
Completion:	2016

Completed Works:

Glass partitions

Lindner Life glass partitions

Wooden doors

Fire Protection Doors
